## GENERAL INFORMATION

The certification body provides an independent central certification scheme embodying modern quality assurance requirements and a commitment to conform to International standards. The Certification Scheme is owned and managed by the CB. Certificates are issued following success in a thoroughly searching examination conducted at Authorised Qualifying Bodies, and are valid for five years. After the first five-year period of validity, certificates may be renewed following the submission of evidence of continuous satisfactory employment in the application of NDT. At the end of a second five-year period of validity, recertification follows success in an examination which, in the case of Levels 1 and 2, consists of a practical test or, in the case of Level 3, a written test or compliance with a structured credit system.

Certificates satisfy the requirements of International standard ISO 9712. The qualification requirements (eyesight, training and experience) also satisfy the provisions of a number of other widely accepted national and international standards and guidelines. Candidates who are successful in the qualification examination, but who have not yet acquired the experience necessary for certification should, when experience has been gained under appropriate certificated supervision apply for certification directly to the Certification Body with evidence of the requisite experience. See NDT personnel certification Manual (PCM-01) for detailed information.

Employers may find it convenient to utilise this system within their internal NDT personnel certification programmes (e.g., within SNT-TC-1A or EN 4179 systems). Further guidance on any aspect of NDT personnel certification may be obtained from the CB.

The following Levels of Competence are covered by the certification scheme:

### Level 1

An individual certificated to level 1 is qualified to carry out NDT operations according to a written instruction and under the supervision of level 2 or level 3 personnel. Level 1 certificated personnel have demonstrated the competence to set up equipment, carry out the test, record and classify the results in terms of written criteria, and to report the results. Level 1 personnel have not demonstrated competence in the choice of test method or technique to be used, nor for the assessment, characterisation or interpretation of test results.

### Level 2

This level is qualified to perform and direct NDT according to established or recognised procedures and have demonstrated competence to choose the technique for the test method used; set up and calibrate equipment; perform and supervise the test; interpret and evaluate results according to applicable standards, codes or specifications; define the limitations of application of the testing method for which they are qualified; understand and transform NDT standards and specifications into practical testing instructions adapted to the actual working conditions; prepare written test instructions; carry out and supervise all level 1 duties; organise and report the results of non-destructive tests.

### Level 3

Personnel holding this, the highest level, are qualified to direct any NDT operation for which they are certificated and: assume full responsibility for a test facility and staff; establish and/or validate NDT instructions or procedures; interpret codes, standards, specifications and procedures; designate the particular test methods, techniques and procedures to be used. Level 3 personnel have demonstrated: a competence to interpret and evaluate test results in terms of existing codes, standards and specifications; possession of the required level of knowledge in applicable materials, fabrication and product technology sufficient to enable the selection of methods and techniques, and to assist in the establishment of test criteria where none are otherwise available; a general familiarity with other NDT methods; the ability to guide personnel below level 3. Where level 3 duties regularly require the individual to apply routine NDT by a method or methods, the CB recommends that industry demand that this person should hold and maintain level 2 certification in those methods.

## Certification Details:

### Sectors (Products)

Castings  
Forgings  
Weldments

### Sectors (Industry)

Pre and in-service Inspection

### NDT Methods

Eddy Current Testing  
Radiography Testing  
Ultrasonic Testing  
Magnetic particle Testing  
Liquid Penetrant Testing  
Radiographic Interpreter  
Phased Array Ultrasonic Testing &  
Data Interpretation  
Time of Flight Diffraction Ultrasonic  
Testing & Data Interpretation  
Basic Radiation Safety

### Scope of Competence

X-rays  
Gamma Rays  
Dye Penetrants  
Fluorescent Penetrants  
Fixed Installations  
Portable Equipment  
Dense Metals  
Exchanger Tubes  
NDT Instruction Writing  
Single Frequency  
Multiple Frequency  
Butt welds in plate  
Butt welds in Pipe
